This is the read me for Figma task given by @Codetech Solutions internship.

OVERVIEW:

This design is done in Figma based on the tasks given, and is compiled for GitHub.

It is an e-commerce website based on anime figurines with an interactive UI.

Main page.

The name of the e-commerce website design is "The Merchandise House" as it is majorly focused on selling action figures for demanding customers.
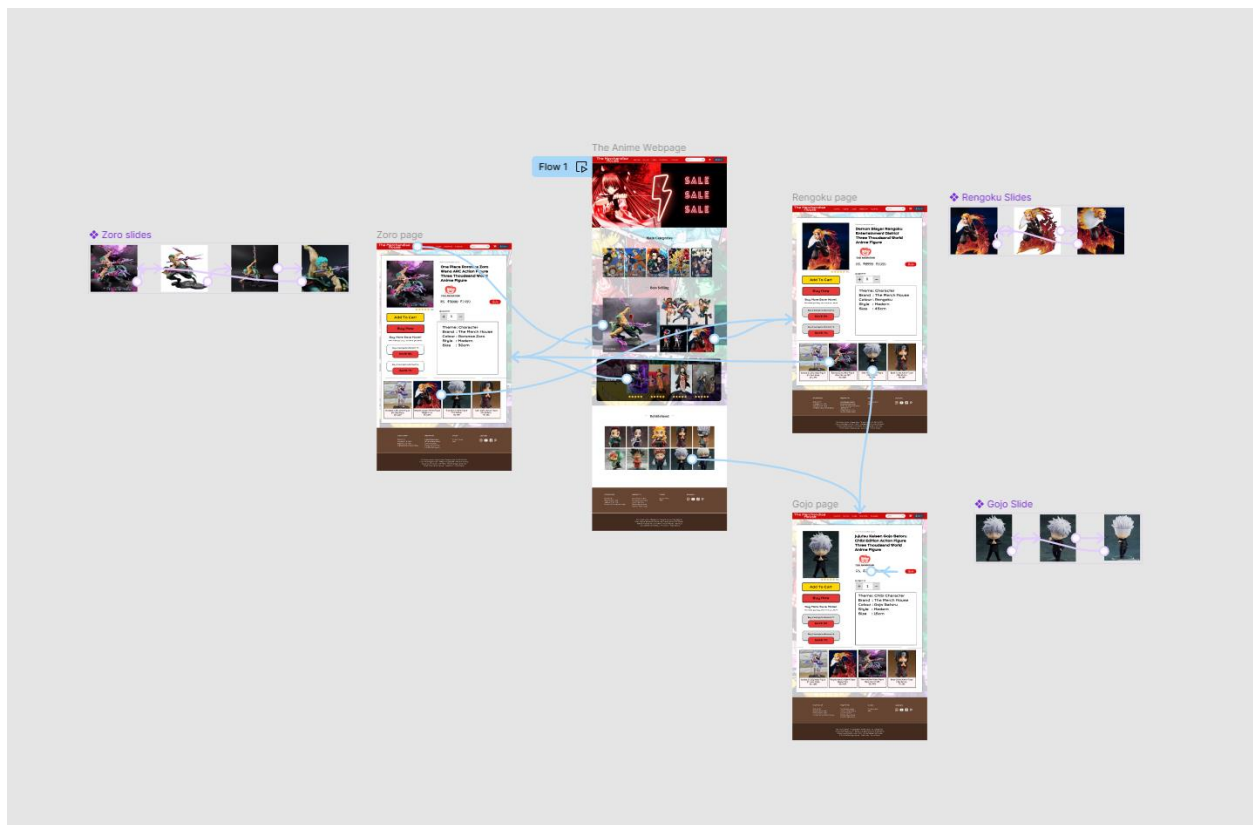

LAYOUT:

The main page is designed using elements such as rectangles and squares, with some creative anime images to make it more appealing.

Three more subpages have been made as a clickable UI for the user.

The transition of pages is done via Prototyping, a feature that allows to connect different pages altogether.

The subpages also have clickable images to provide more pictures of that particular action figure.

Prototyping.

Main page and subpage.
